<h1>CuZn41Pb1Al</h1>		Elements	% mean	Impurities	% max.
		Cu	57.3	Fe	0.3
		Pb	1.35	Sn	0.3
		Al	0.4	Ni	0.3
		Si	0.125	Mn	0.1
		Zn	balance	Other	0.2
		EN 12167	CW620N		

* Reference values in % by weight

Properties and typical applications

CW620 is a free cutting and hot forging brass. Aluminum gives the material a shiny golden appearance avoiding additional polishing, which can be useful for decorative pieces.

Physical properties at 20°C		Heat treatment	
Density (g/cm ³)	8.3	Melting range (°C)	885-900
Young modulus (GPa)	85	Hot working (°C)	650-800
Thermal expansion coefficient (20-300°C) (10 ⁻⁶ /K)	20	Annealing temperature (°C)*	450-600
Thermal conductivity (W/m.K)	80	Stress relieving treatment (°C)**	250-350
Thermal capacity (J/Kg.K)	380	* Annealing treatment of a material leads to reduce its hardness and increase its ductility.	
Electrical conductivity (% I.A.C.S.)	18		
		** Stress relieving treatment allows to eliminate the residual stresses present in the material in order to avoid the stress corrosion cracking.	

Forming		Joining	
Hot forming	Excellent	Soldering	
Cold forming	Not recommended	Soft	Excellent
Machinability	80% (Ref: CuZn39Pb3 = 100%)	Hard	Good
Corrosion resistance		Welding	
Free-cutting brasses generally have good resistance to corrosion in organic materials and neutral or alkaline compounds. However, they may present a problem of cracking corrosion in an aggressive environment in the presence of internal stresses, but also a risk of dezincification in the presence of hot and acidic water.		Gaz welding	Not recommended
		Inert gas shielded arc welding	Not recommended
		Resistance welding	Not recommended
